Art Unit: 1633

DETAILED ACTION

Applicant's response to the restriction requirement received on 12/21/06 has been entered. Claims 1, 3-5, 7-9, 11-13, 15-20, 22, 24-27, 41, and 43-98 are currently pending in the instant application.

Applicant's election without traverse of Group VIII and the species "PTHrp" is acknowledged. Based on applicant's election, Claims 1, 3-5, 7-9, 11-13, 15-18, 22, 24-25, 41, and 43-98 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention and/or species, there being no allowable generic or linking claim. Therefore, claims 19-20, and 26-27 are currently under examination. An action on the merits follows.

Priority

The applicant has filed an Application Data Sheet that provides list of applications to which this application claims benefit of priority. It is noted the status is missing for each application. In particular, a number of these applications have issued as Patents. It is suggested that applicant either file a new Application Data Sheet which includes the status of the parent applications, or amend the first page of the specification to include a paragraph setting forth the priority information.

The disclosure of the prior-filed applications, Application Nos. 07/466,008, 07/610,515, 07/919,297, 08/031,801, 08/112,848, and 08/234,145 fails to provide adequate support or

Application/Control Number: 10/658,521

Art Unit: 1633

enablement in the manner provided by the first paragraph of 35 U.S.C. 112 for one or more claims of this application. The claims under consideration recite a fully human immunoglobulin specific for PTHrp. However, none of the specifications of Application Nos. 07/466,008,

Page 3

fully human immunoglobulin specific for PTHrp, or suggest making such an antibody using

07/610,515, 07/919,297, 08/031,801, 08/112,848, or 08/234,145 provide any disclosure for any

transgenic mice as disclosed in any of these parent applications.

The applicant is reminded that in order to receive benefit of priority to an earlier filed application, the later-filed application must be an application for a patent for an invention which is also disclosed in the prior application (the parent or original nonprovisional application or provisional application). The disclosure of the invention in the parent application and in the later-filed application must be sufficient to comply with the requirements of the first paragraph of 35 U.S.C. 112. See *Transco Products, Inc. v. Performance Contracting, Inc.*, 38 F.3d 551, 32 USPQ2d 1077 (Fed. Cir. 1994). Based on the analysis provided above, none of Application Nos. 07/466,008, 07/610,515, 07/919,297, 08/031,801, 08/112,848, or 08/234,145 meet these requirements. Therefore, benefit of priority is denied to Application Nos. 07/466,008, 07/610,515, 07/919,297, 08/031,801, 08/112,848, or 08/234,145

The effective filing date for claims 19-20 and 26-27 of the instant application is therefore the filing date of parent application 08/430,928, which is 4/27/95.

Information Disclosure Statement

The information disclosure statement filed 11/28/03 does not fully comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because the citation on page 2 of the 1449, "Aldhous", is not a complete citation as it is missing the date of publication of the reference and the complete page numbers of the reference. This citation has been lined through by the examiner and has not been considered at this time as to the merits.

Since the submission appears to be *bona fide*, applicant is given **ONE** (1) **MONTH** from the date of this notice to supply the above mentioned omissions or corrections in the information disclosure statement. NO EXTENSION OF THIS TIME LIMIT MAY BE GRANTED UNDER EITHER 37 CFR 1.136(a) OR (b). Failure to timely comply with this notice will result in the above mentioned information disclosure statement being placed in the application file with the noncomplying information **not** being considered. See 37 CFR 1.97(i).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out

Art Unit: 1633

the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 19-20 and 26-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,993,817 (1999), hereafter referred to as Yoneda et al., in view of U.S. Patent No. 5,545,806 (1996), hereafter referred to as Lonberg et al.

The applicant claims a fully human immunoglobulin specific for PTHrp. Please note that while claims 19-20 are product-by-process claims, case law states that "[E]ven though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." *In re Thorpe*, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985) (citations omitted).

Yoneda et al. teaches monoclonal antibodies specific for PTHrp, including human PTHrp, where the antibody is produced in a transgenic mouse whose immune system has been modified so that human antibodies can be generated (Yoneda et al., columns 5-6). While Yoneda et al. does not specifically teach a fully human antibody specific for PTHrp, Yoneda et al. does specifically teach making a human antibody specific for PTHrp by immunizing a transgenic animal capable of producing human antibodies (Yoneda et al., columns 5-6, bridging paragraph, and column 6, lines 39-52).

Lonberg et al. supplements Yoneda et al. by teaching transgenic mice comprising unrearranged human heavy chain and light chain loci, which are capable of producing fully human antibodies following immunization with an antigen (Lonberg et al., claims 1-14, and columns 3-4 and 9-10). In particular, Lonberg et al. teaches the production of human antibodies against human proteins using the transgenic mice (Lonberg et al., columns 9-10).

Therefore, based on the specific motivation provided by the teachings of Yoneda et al. for making antibodies against PTHrp using transgenic mice capable of producing human antibodies in response to immunization, it would have been *prima facie* obvious to the skilled artisan at the time of filing to immunize the transgenic mice of Lonberg et al. with PTHrp in order to produce a human antibody specific for PTHrp. Further, based on the substantial guidance for making human antibodies in transgenic mice provided by Lonberg et al., the skilled artisan would have had a reasonable expectation of success in generating a fully human antibody specific for human PTHrp by immunizing the transgenic mice taught by Lonberg et al.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

Application/Control Number: 10/658,521

Art Unit: 1633

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 19-20, and 26-27 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 19-20, 26, and 34 of copending Application No. 10/656,623, hereafter referred to as the '623 application. Although the conflicting claims are not identical, they are not patentably distinct from each other for the following reasons.

The claims of the '623 application are broader than the instant claims in that they are drawn to an immunoglobulin having a fully human variable region, rather than a fully human immunoglobulin, which has fully human variable and constant regions. However, it is clear from the '623 specification that a fully human antibody is a preferred embodiment of the invention ('623 specification, pages 1-2, bridging sentence). Therefore, claims 19-20, 26, and 34 render obvious the instant claimed invention.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

No claims are allowed.

Any inquiry concerning this communication from the examiner should be directed to Anne Marie S. Wehbé, Ph.D., whose telephone number is (571) 272-0737. If the examiner is not

Application/Control Number: 10/658,521
